THE OFFER

What you get, and what is charged at actuals

Everything below applies to the two products you choose, for twelve months from the day your tenant goes live.

INCLUDED, FREE OF COST

Unlimited module usage

Every module of both products, with no usage caps on the modules themselves.

60,000 AI Units for the year

Assistants, agents and document AI draw from one pool shared across both products. One AI Unit equals 1,000 input-equivalent tokens, and you see usage as it happens.

SAP integration: free, one-time

Our team connects both products to your SAP system once, at no cost. The products are built SAP-native and post into SAP.

Any other ERP: free MCP Server access

Not on SAP? Get free access to the AeonX MCP (Model Context Protocol) Server to integrate Oracle, Microsoft Dynamics, Odoo or any other ERP.

Charged at actuals

If you choose Xpense, air tickets and hotel bookings made through it are paid at actual cost. The software stays free.

Quoted separately, if you need them

- Sensors, hardware or installation for ManuFex or Setu Edge
- Custom development
- Further integrations after the first
- Extra AI Units beyond 60,000

HOW IT WORKS

1

Register

Scan the QR or visit offer.aeonx.digital and pick your two products.

2

Offer by email

Your offer letter and reference number arrive straight away.

3

Activation call

Within two business days we confirm scope and sign a short free-use agreement.

4

Go live

SAP connected free, or MCP Server access for any other ERP. Your twelve months start.

CHOOSE YOUR TWO

Twelve products to choose from

Built SAP-native, hosted and supported by AeonX. AI agents propose; your people approve.

Source-to-pay on SAP: supplier onboarding, sourcing, PR to PO, goods receipt and invoice match, with 17 AI agents that propose and a person who approves.

B2B distribution and retail: dealer ordering, schemes and claims, POS at the till, and reorder models trained per organisation.

Travel and expense: corporate flight booking with real airline PNRs, receipt OCR, approvals and policy. Tickets and hotels at actuals.

IIoT machine monitoring and predictive maintenance: live machine status, OEE with downtime root cause, and SAP PM work orders raised automatically.

Logistics execution: transport planning, gate and weighbridge, GPS tracking, export shipments and freight settlement.

SAP-native B2B sales CRM with a WhatsApp bot, field visits and trade intelligence, synced with SAP master data.

Mine-to-plant dispatch on a QR journey slip, posting deliveries, goods movements and supplier invoices into SAP.

End-to-end encrypted enterprise messaging and calling, with an AI assistant limited to the platforms you connect.

AI assistant for your people team: HR, SAP and Microsoft 365 on WhatsApp, on AeonX's own fine-tuned model, with pay data kept off hosted models.

AI assistants built into our apps: answers from your own data, drafts and checks prepared for your approval, every action recorded.

One clean bridge between SAP (ECC, S/4HANA, RISE, GROW) and every app: plug in once, and upgrade SAP without breaking integrations.

Smart devices for plants, mines and gates: weighbridges, cameras and machines reporting into your systems. Hardware quoted separately.

WHO YOU WOULD BE WORKING WITH

A product company that also runs SAP

AeonX Digital Technology Limited is listed on the BSE. We build, host and support our own products, and implement and run SAP for the same customers.

280+

engineers and consultants

13

enterprise products

15+

years of SAP delivery

7

offices, India and Dubai

AI your risk team can approve. Agents propose and a person approves. Autonomy is off by default and fails closed, and every agent run is logged and replayable.
